

# mySAP Implementation Success Story @ YASH

## Industry

---

Solar Power Products

## Geography

---

USA

## The Client

---

Evergreen Solar Inc. of Marlboro, Mass., a leading manufacturer of solar power products, implemented a solution to support global expansion and satisfy compliance requirements.

## Key Challenges

The key challenges encountered by YASH team

- Replace homegrown and legacy accounting software with an integrated enterprise-wide solution
- Improve business processes by eliminating manual procedures
- Meet Sarbanes-Oxley Act requirement for reporting

"MySAP ERP provides the level of control required to ensure we are in compliance."

Bill Ryan  
-IT Manager

## Business Needs

The solar industry was expanding rapidly, and the client wanted to increase its production capacity in order to remain closer to a major marketplace. As the company prepared for its global expansion, it was in need of a solution that could provide basic support for multiple languages, multiple plants, and multiple business areas including finance and sales. Client was looking for a partner who could help them in accomplishing the following project objectives:

- Implement a world-class enterprise resource planning solution to support global operations
- Allow the company to rapidly expand worldwide
- Implement the solution in period of 12 weeks

## The Solution

YASH Technologies through its subsidiary Genesis Corporate Solutions (GCS) helped Evergreen Solar to implement mySAP Business Suite. To satisfy Sarbanes-Oxley requirements, mySAP Business Suite had to be in place at Evergreen Solar for a minimum of three months in 2005. YASH had to work under tight deadline with only 12 weeks to perform the implementation. YASH leveraged SAP Best Practices for High Tech when developing its qualified mySAP All-in-One partner solution to ensure Evergreen Solar met its tight deadline. Predefined business processes, industry best practices, and a tool to help configure the software enabled Evergreen Solar to streamline the implementation process.

## Key Benefits

YASH Technologies with its implementation of mySAP Business Suite has enabled Evergreen Solar to conduct its business processes more efficiently and its employees to focus on more strategic aspects of their jobs. Key benefits of the solution were:

- Eliminated time-consuming manual processes
- Cut month-end closing cycle in half
- Gained needed visibility into global financial, production, and inventory data
- Provided functionality to accurately track and maintain inventory
- Substantially reduced customer complaints
- Found efficient way to facilitate Sarbanes-Oxley compliance
