

Accelerate your Transformation Journey with Rapid SAP Migration to the Hyperscaler Cloud

75% of all SAP systems will be deployed or migrated to a cloud platform by 2022

Value Proposition

- **SAP Partnerships and CSP Alliances:** As one of the largest SAP service providers, YASH has built a strong and effective business partnership with SAP globally. YASH has technology and joint GTM relationships with all major Hyperscalars (AWS, Azure, GCP etc) and extensive experience in successfully strategizing and implementing complex migrations while reviving several failed migration projects.
- **Proven track record:** Successfully deployed solutions for Fortune 500 organizations across geographies, industry verticals, functional domains, and industrial landscapes.
- **Cloud Security:** With a highly regarded CyberSecurity practice, YASH understands the risks, compliance requirements and the implications of identities and applications in the digital age, and ensures that large technology landscapes of customers are secure
- **Resources:** Certified and skilled professionals offer functional, technical, vertical and business advisory expertise across a broad spectrum of SAP on-premise and Cloud solutions.

Challenges of SAP migration to the cloud include

- Traditional server/ storage/network hardware with backup/HA solutions can be expensive
- Running SAP on-premises without automation solutions is among the most significant cost factors
- Dev/Test/QA instances are “super busy” during implementations and become idle after go-live, except perhaps the QA instance which would be used for troubleshooting
- Many SAP customers cannot afford to have a second data center for disaster recovery and tend to rely on old-style tape backup
- Choice of data center locations is limited despite global user access
- Other technologies are needed when SAP doesn't meet the customer's analytics/BPM/UX/EAI business needs
- Sizing is often tricky, and customers realize hardware/ hosting vendors are oversized after rollout

All these reasons (and more) are compelling SAP customers to migrate their SAP workloads to the cloud. Migrating SAP systems and databases to Hyperscaler Cloud platforms empowers the organization with real-time insights, elasticity, and agility. It is a “ game changer” in many ways and has gained wide traction.

YASH is a leading provider of SAP on the Cloud Migration services globally. We have a structured, consultative and best practices centered approach to migrating mission-critical SAP workloads to the Cloud.
