An international packaged foods manufacturer implements stringent role-based security with YASH's SAP Security Services

Revenue
$ 3.5+ Billion

Industry
Consumer Packaged Goods

YASH value proposition

- Well-defined engagement model - SLA-based support
- Dedicated resource model with 100% transparency on resource utilization
- Role cleanup and redesign activities to avoid SOD conflicts
- Create and modify rules as per business needs and SAP best practices

Results

- Reduction in end-user errors by implementing a role-based model
- Improved user adoption by simplifying and automating day-to-day tasks
- Increased compliance and data quality by simplifying data entry and reporting processes
- An average of 300 tickets resolved/month
- No escalations or breached SLAs

What the business–IT teams wanted to achieve

- SAP S4HANA security upgrade from 1809 – 2021
- SAP Security User Administration, Role Administration, and Fiori application configurations
- SAP Security and Support Services
- Periodic user activity reporting to IT and Business Leadership Teams
- Implement security across plant rollouts in line with end-to-end project lifecycle
