

*More than what you think.*

# Accelerate your Transformation Journey with SAP on (any) Hyperscaler Cloud Platforms

*By 2024, nearly **60%** of IT spending on application software and/or hosting will be directed toward cloud technologies*

*"**75%** of all databases and applications will be deployed or migrated to a cloud platform by 2022," says Gartner*

## Why move SAP workloads to Hyperscalers from On-Prem?

- Hardware sizing challenges
- Expensive traditional server/ storage/ network systems
- Limitations in analytics/BPM/UX/EAI requirements
- Limited datacentre locations
- Challenges in Automation
- Reduced hardware procurement time - almost zero, as the cloud is available On-Demand
- No Upfront investment for hardware and an overall reduction in TCO

***All these reasons (and more) are compelling SAP customers to migrate their SAP workloads to the cloud.***

Migrating SAP systems from On-Prem to Hyperscaler Cloud platforms empowers the organization with real-time insights, scalability, and agility using many native services offered by the Hyperscaler platforms. It is a "game-changer" and has gained wide traction.

## YASH Portfolio of Services for SAP on Hyperscaler

- Cloud Assessments
- Economics & Cloud Value Computation
- Business Case for Cloud Adoption & Strategic approach
- Cloud Security specific to SAP applications
- Cloud Foundation, Systems provisioning using IaaS (Terraform, Ansible)
- SAP Implementations & Migrations (Rehosting) to Cloud
- Cloud Hosting /Operations
- Modernization while Migrating to Cloud

## YASH SAP on Hyperscaler - Support and Manage

- Hybrid Cloud Operations
- YASH Proprietary tools (YASH4HANA, PathFinder, Perfomax, CureSAP, Snoopy)
- Cloud Infra Operations for SAP landscape
- DevOps
- DB Management
- Analytics (Logs etc.)
- Automated System Refreshes, Start/Shutdown
- AIOps

## Value Proposition

- **Long-standing and robust SAP Partnership and CSP Alliances:** YASH has built a solid and effective business partnership with SAP globally and is one of the largest SAP service providers. YASH has the technology and joint GTM relationships with all significant Hyperscalers (AWS, Azure, GCP, etc.) and extensive experience in successfully strategizing and implementing complex migrations while reviving several failed migration projects. YASH is one of few AWS MAP partners in the US. YASH helps customers to get funding for Cloud migrations which reduces costs significantly
- **Proven Track Record:** YASH has successfully migrated many SAP systems for various organizations across geographies, industry verticals, functional domains, and technology landscapes.
- **Skilled & Experienced Resources:** Certified and qualified professionals in SAP and various Hyperscaler platforms offer functional, technical, vertical, and business advisory expertise across a broad spectrum of SAP on-premise and Cloud solutions.
- **Cloud Security:** With a highly regarded CyberSecurity practice, YASH understands the risks, compliance requirements, and implications of identities and applications in the digital age and ensures that the complex and distributed technology landscapes of customers are secure. YASH Technologies is attested for ISO 27001:2013 & SOC 1 Type 2, an endorsement of our continued compliance to the highest information security management standards.
- **YASH ASCENT Framework** and assessment tools help simplify and accelerate migrations & realize business value.
- **Modernize while Migrating:** YASH helps modernize SAP systems while migrating to Hyperscaler along with many additional services such as reducing data footprint, testing time, business process documentation, optimizing operations, etc.
- **Managed Services:** Robust and resilient 24\*7 managed support services keep your cloud SAP applications running without glitches.
