

# ERP Transformation for Chemical Industry Leader Results in Enhanced Global Manufacturing Operations

## About the Customer

- **Industry** - Manufacturing
- **Sub Industry** - Chemical
- **Customer HQ** - Dubai
- **Key Technologies** - Microsoft Dynamics Business Central

## Business Needs

- Multiple tenants of ERP across the globe are causing issues in collaboration, communication, and data integration. The client needed help deciding whether to redesign and develop the existing implementation vs a completely new Greenfield implementation with data migration.
- Simple and scalable solution: Invest in a future-ready ERP that can complement the future growth plans of the client
- Integrated solution to simplify and integrate global business operations and provide flexibility while communicating in the evolving application landscape for the client

## YASH Solution

- High-level As-Is business process mapping
- Understanding the Existing Business Central Platform
- Assess internal/external dependencies – interface; security, compliance, encryptions & third-party integrations architecture
- Module assessment available in the existing system to help them streamline and automate manual process
- Outside ERP system integrations and applications required

## Business Outcomes

- Developed a report with business processes and system-level suggestions to overcome their challenges.
- Detailed assessment report to support the decision-making process on whether to stick with the existing system or move to a new system
- Developed a business case for the recommended ERP system
